ABSTRACT

The essence of simulation doesn't reside in a software package: it's in the problems that are solved and the questions that are answered. FlexSim has remained committed to each and every concerned decision maker who has approached with a question about their process, and has continued to tailor their products and services to better provide answers. The recently released version of its flagship general simulation product, FlexSim 7.0, is fast and easily customizable, and provides impressive 3D visuals never before seen in process simulation. FlexSim Healthcare 4.0, also released in 2013, has enhanced features to help guide medical facilities through uncertain times in healthcare policy. And with an acclaimed textbook, new media, and expansive support, FlexSim Education is the first choice in any collegiate simulation classroom. At FlexSim, it's not just about software: it's about solutions.

FlexSim Simulation Products, Inc., is a leader in process simulation technology. FlexSim offers a full range of solutions to industries around the world, helping decision makers and researchers answer the most pressing and valuable questions they have about any imaginable process. From manufacturing and packaging to logistics and warehousing, and everything in between, FlexSim has the software, consultants, training, and know-how to solve any problem and deliver the smoothest simulation experience available. This set of instructions for producing an extended abstract for a poster presentation at the 2013 Winter Simulation Conference (WSC) with Microsoft Word also serves as a sample file that you can edit to produce your submission. Please follow the guidelines herein when preparing your poster abstract. Failure to do so may result in a poster being rejected, returned for appropriate revision, or edited without your knowledge.
